Gurugram, Haryana, India

EDUCATION

B.A. LL.B. (Hons.)
Dr. Ram Manohar Lohia National Law University, Lucknow
2015

Goethe-Zertifikat B1
Goethe-Institut e.V.
2007

SKILLS

- AI/ML: Machine Learning, Deep Learning, NLP, Generative AI, Prompt Engineering, Transformers, OpenAI API, OpenAI Responses API, XGBoost, Scikit-learn, TensorFlow, PyTorch, Parallel Agentic Orchestration, Agentic Workflows, Gemini CLI, Open Code, Model Deployment, Feature Engineering

- Python: FastAPI, Flask, Django, Pandas, NumPy, Scikit-learn, XGBoost, OpenAI API, Machine Learning, Data Science, REST API, RESTful API, SQLAlchemy, Asyncio, Asynchronous Python, Pytest, Unit Testing, Celery,

Profile

Product engineer and data scientist with over 10 years of experience spanning full-stack development, data science, and intellectual property law. Proven track record of driving business impact through technical innovation, including boosting supply efficiency by 20% and reducing technical debt by over 90%. Expertise in building and launching products from scratch, deploying machine learning models, and navigating complex legal and technical landscapes. Combines first-principles thinking with a builder mindset to ship fast, simplify ruthlessly, and deliver measurable results.

Experience

Entrepreneur-in-Residence, Wiom
Oct 2022 - Present

Gurugram, Haryana, India

- Genie (2025): Increased supply efficiency by 20% (15% from core rewrite + 5% from ML integration). Reverse-engineered and redeployed an undocumented legacy algorithm with zero downtime after the original creator's departure.
- CRM Forge (2024): Developed a streamlined platform (~7k LOC) that provisions custom CRM workflows via JSON configs in 2–3 minutes, consolidating and replacing five legacy systems (~100k LOC total). Enabled cross-functional teams to align and deploy tailored solutions in hours.
- Happy (2023): Decreased call-center dependency by ~5x while enhancing customer outcomes and agent satisfaction. Designed a telephony bot with lightweight CRM for escalations, plus a Hindi/Hinglish AI chatbot for instant, brand-consistent scripting—delivering quicker resolutions, reduced agent frustration, and consistent quality during demand spikes.
- Beyond core responsibilities, leveraged tech, IP, and corporate law expertise to shape Wiom's IP strategy, safeguard innovations, and aid fundraising through pitch deck refinements and investor legal diligence.

Solo IndieHacker,
Jun 2021 - Sep 2022

- Built and launched three full-stack Laravel products from scratch while bootstrapping under tight financial constraints.
- Handled the complete product lifecycle including market research, backend and frontend development, branding, and direct sales.
- Executed sales and networking strategies, engaging with over 50 events to drive product adoption and gather market feedback.

Intellectual Property & IP/Tech Lawyer, Sujata Chaudhri IP Attorneys (SCIP) & Rahul Chaudhary & Partners
Dec 2015 - Apr 2022

- Promoted to Senior Associate 3-5 years ahead of peers through strong performance in high-stakes litigation.
- Helped secure an interim injunction in the landmark 2016 Rubik's Cube trade dress case (Seven Towns v. Kiddiland).

Web Scraping, OOP, Object-Oriented Programming, Scripting

- Unix: Linux, Shell Scripting, Bash, Command Line Interface, CLI, Terminal User Interface, TUI, Git, SSH, Cron, Sed, Awk, Grep, Vim, Nano, Emacs, System Administration, POSIX, Unix Commands

- Cloud: AWS, Amazon Web Services, Amazon S3, AWS S3, Cloud Computing, Docker, Kubernetes, CI/CD, Terraform, Serverless, AWS Lambda, Google Cloud Platform, GCP, Microsoft Azure, Microservices, Cloud Deployment, Infrastructure as Code, Scalability

- Frontend: JavaScript, React, Next.js, HTML, HTML5, CSS, Cascading Style Sheets, Tailwind CSS, Bootstrap, Responsive Design, Mobile-First Design, TypeScript, Vue.js, Frontend Development, UI Development, Accessibility, WCAG, Webpack, Vite, Jest

- CLI/TUI Tooling: CLI, TUI, Python curses, curses, Terminal User Interface, Rich, Textual, Command Line Interface, Keyboard event handling, Interactive console, Shell Scripting

- Data Engineering: Data Pipelines, ETL, ELT, SQL, PostgreSQL, MySQL, SQLite, Snowflake, Pandas, Python, Data Processing, Data Modeling, AWS S3, Parquet, HDF5, Data Warehousing, Scalable Data Systems

- System Design: System Design, Scalable Systems, Microservices, Architecture Design, API Design, Performance Optimization, Distributed SystemsProject/Team Management: Project Management, Agile Methodologies, Team Leadership, Stakeholder Management, Risk Management, Cross-Functional Team, Product Delivery

- Handled hundreds of trademark disputes, resolving most via pre-litigation mediations and favorable settlements, saving clients substantial time and costs.

Marketing Associate, Rainmaker

Apr 2015 - Nov 2015

- Drove higher email open rates and engagement via personalized, A/B-tested Mailchimp campaigns with custom HTML designs.
- Curated genuine customer testimonials that built trust and increased site conversions.
- Planned and executed a high-energy on-campus quiz for over 300 law students, boosting brand visibility and capturing leads.

Projects

gvim

View Project

- Why: Wanted to make detailed graph/ animation rich notes while re-learning calculus, without using bloated enterprise software that took me away from my vim-based muscle memory.
- What: GTK4-based graphical interface that preserves vim based navigation across document 'blocks'. Specialized blocks to render graphs in declarative python, and animations in ThreeJS.

ai

View Project

- Why: Wanted to deep dive into OpenAI's new 'Responses' API (optimized for agentic workflows) and study how it differed from the 'Completions' API. Also, was curious if I could find an 'aesthetic' way to do this using pure CLI (no TUI).
- What: Re-built opencode from ground up as a pure CLI with tools for file editing, diff auditing, interactive Q&A, repository analysis, Git safeguards, sandboxed shell commands, user confirmation for changes, and secure API key storage.

xyz

View Project

- Why: Traditional to-dos reward busywork. xyz forces every task into a JTBD outcome—"When X, I want Y so Z"—to surface value, align with mission, and drive compounding, non-linear progress. Inspired by the 'Jobs to Be Done' (JTBD) framework invented by Tony Ulwick in the late 1980s.
- What: A vim-first, terminal-native task tracker that captures work as structured JTBDs with North Star scores (p: values, q: impact, r: embodiment). Pure Python (curses + CSV), instant setup for clarity-driven creators.

o

View Project

- Why: Conventional file managers rely on arrow keys and mice, straining the pinky fingers of QWERTY users. o employs Vim’s ergonomic hjkl navigation—to enable a complete file system browser where every action is executed solely through these keys

- What: A Python curses TUI directory browser. 'The Matrix'-movie inspired falling raindrops display, hjkl modal nav, yank/cut/paste/delete, reveal/picker/save modes, custom handlers.

vixl

View Project

- Why: Microsoft Excel is bloated with GUIs and opaque formulas, faltering on spreadsheets over 100k rows while forcing pinky-straining arrows and mice.
- What: A Python curses TUI spreadsheet editor for CSV, Parquet, XLSX, HDF5. With Pandas' elegant, declarative df syntax in a terminal TUI, powered by Vim's ergonomic home-row hjkl for every action—eliminating RSI and unlocking fluid handling of massive datasets.

rt

View Project

- Why: AI-generated slop erodes code intuition by flooding workflows with mediocre patterns. rt counters this by embedding expert snippets—SQL, Python, etc.—into muscle memory through rigorous typing drills, while simultaneously sharpening touch typing, to read AI output like a native language.
- What: A CLI tutor. Parses registered .md courses into hierarchical lessons with rote/jump modes (90%+ accuracy enforced), doc viewing, in-place editing, bookmarks, and search. Curl-install for deliberate, repetition-driven mastery.

Accomplishments

Certifications

- **XGBoost Deep Dive with Python & Pandas** - Hands on Data Science
- **Google Apps Script Complete Course Beginner to Advanced** - Udemy
- **Learn Rust by building Real Applications** - Udemy
- **AWS Amazon S3 Mastery Bootcamp** - Udemy
- **PHP OOP: Object Oriented Programming for Beginners + Project** - Udemy
- **Crash Course - Learn to Create a PHP MVC Framework** - Udemy
- **Modern JavaScript From The Beginning** - Udemy
